

Case Study

fortControl supports GObugfree with a practical ISMS platform on the path to ISO-27001 certification.

INITIAL SITUATION

GObugfree wanted to build its ISMS professionally without unnecessary complexity. Maintaining it with Excel, Word, and PowerPoint was time-consuming, error-prone, and barely scalable. At the same time, they needed a solution that clearly structures the ISO-27001 process and integrates seamlessly into their workflows.

SOLUTION

With fortControl, GObugfree has centralized, structured, and largely automated risks, measures, and responsibilities. The platform provides continuous support, from risk assessment and tracking of measures to visualizing connections and preparing for audits.

Result: Significant time savings, high transparency, and reliable proof at all times for regulators, customers, and partners.

ADDED VALUE

Transparency and traceability

Information security is clearly visible at all times through centralized control of risks, measures, and responsibilities, as well as visualization of interconnections.

ISO-27001 certification readiness

Structured support in the certification process and consistently available, reliable documentation. Ideal for audits and external reviews.

Added value for customers and partners

Demonstrable professionalism in dealing with information security.

IN A NUTSHELL

Challenges

- Manual solutions
- Low transparency
- Lack of structure and centralization

Benefits

- Significant time savings
- ISO-27001 compliance
- Less manual work and fewer errors
- Fast personal support

"With fortControl, we quickly built our ISMS and can easily keep it up to date. It was a simple and effortless experience. A real time-saver."
